NORTH-HOLLAND

SUBJECT INDEX OF VOLUME 68*

Coupled problems

A heat function formulation for thermal convection in a square cavity, F.L. Bello-Ochende (2) 141 – 149
Buoyancy-induced inclined boundary layer flow in a saturated porous medium, J.-Y. Jang and W.-J. Chang (3) 333 – 344

Dynamics

Reversed stability conditions in transient finite element analysis, D.S. Malkus, M.E. Plesha and M.-R. Liu (1) 97 – 114

Elasticity

Decomposition methods for adherence problems in finite elasticity, P. Le Tallec and A. Lotfi (1) 67 – 82
A new finite element scheme for bending plates, Ph. Destuynder and Th. Nevers (2) 127 – 139
Buckling of polar orthotropic circular plates on elastic foundation by computerized symbolic algebra, I. Elishakoff and J. Tang (2) 229 – 247

Finite difference methods

A heat function formulation for thermal convection in a square cavity, F.L. Bello-Ochende (2) 141 – 149
Simulation of environmental flow problems in geometrically complex domains. Part 1: A general coordinate transformation, R.L. Meakin and R.L. Street (2) 151 – 175
Simulation of environmental flow problems in geometrically complex domains. Part 2: A domain-splitting method, R.L. Meakin and R.L. Street (3) 311 – 331
Buoyancy-induced inclined boundary layer flow in a saturated porous medium, J.-Y. Jang and W.-J. Chang (3) 333 – 344

Finite element and matrix methods

Finite element model of viscoelastic membrane deformation, M.K. Warby and J.R. Whiteman (1) 33 – 54

* The issue number is given in front of the page numbers.

Decomposition methods for adherence problems in finite elasticity, P. Le Tallec and A. Lotfi (1) 67 – 82
A consistent approximate upwind Petrov–Galerkin method for convection-dominated problems, A.C. Galeão and E.G. Dutra do Carmo (1) 83 – 95
Reversed stability conditions in transient finite element analysis, D.S. Malkus, M.E. Plesha and M.-R. Liu (1) 97 – 114
Implementation of the discontinuous finite element method for hyperbolic equations, R. Touzani (1) 115 – 123
A new finite element scheme for bending plates, Ph. Destuynder and Th. Nevers (2) 127 – 139
Face-apex projectors for the interpolation function of a general tetrahedral mid-edge finite element, C. Lacombe and C. Bédard (2) 177 – 188
Nodal partition of explicit finite element methods for unsteady diffusion problems, J. Donea and H. Laval (2) 189 – 204
Arbitrary Langrangian–Eulerian Petrov–Galerkin finite elements for nonlinear continua, W.K. Liu, H. Chang, J.-S. Chen and T. Belytschko (3) 259 – 310

Fluid mechanics

Numerical solution of steady-state flow through a porous dam, A. Bermudéz and J. Durany (1) 55 – 65
A consistent approximate upwind Petrov–Galerkin method for convection-dominated problems, A.C. Galeão and E.G. Dutra do Carmo (1) 83 – 95
Implementation of the discontinuous finite element method for hyperbolic equations, R. Touzani (1) 115 – 123
A heat function formulation for thermal convection in a square cavity, F.L. Bello-Ochende (2) 141 – 149
Simulation of environmental flow problems in geometrically complex domains. Part 1: A general coordinate transformation, R.L. Meakin and R.L. Street (2) 151 – 175
Simulation of environmental flow problems in geometrically complex domains. Part 2: A domain-splitting method, R.L. Meakin and R.L. Street (3) 311 – 331
Buoyancy-induced inclined boundary layer flow in a saturated porous medium, J.-Y. Jang and W.-J. Chang (3) 333 – 344
Investigation of numerical solutions of integral equation methods for multi-element aerofoils, D.R. Chen and M.J. Sheu (3) 345 – 364

General Rayleigh–Ritz and Galerkin techniques

Buckling of polar orthotropic circular plates on elastic foundation by computerized symbolic algebra, I. Elishakoff and J. Tang (2) 229 – 247

Heat and diffusion

Numerical solution of steady-state flow through a porous dam, A. Bermudéz and J. Durany (1) 55 – 65

A heat function formulation for thermal convection in a square cavity, F.L. Bello-Ochende (2) 141–149
Nodal partition of explicit finite element methods for unsteady diffusion problems, J. Donea and H. Laval (2) 189–204

Incompressible and near incompressible media

Decomposition methods for adherence problems in finite elasticity, P. Le Tallec and A. Lotfi (1) 67– 82

Nonlinear mechanics

Finite element model of viscoelastic membrane deformation, M.K. Warby and J.R. Whiteman (1) 33– 54
Decomposition methods for adherence problems in finite elasticity, P. Le Tallec and A. Lotfi (1) 67– 82
Arbitrary Langrangian–Eulerian Petrov–Galerkin finite elements for nonlinear continua, W.K. Liu, H. Chang, J.-S. Chen and T. Belytschko (3) 259–310

Numerical solution procedures

Numerical solution of steady-state flow through a porous dam, A. Bermudéz and J. Durany (1) 55– 65
Decomposition methods for adherence problems in finite elasticity, P. Le Tallec and A. Lotfi (1) 67– 82
Reversed stability conditions in transient finite element analysis, D.S. Malkus, M.E. Plesha and M.-R. Liu (1) 97–114
Face-apex projectors for the interpolation function of a general tetrahedral mid-edge finite element, C. Lacombe and C. Bédard (2) 177–188
Nodal partition of explicit finite element methods for unsteady diffusion problems, J. Donea and H. Laval (2) 189–204
Investigation of numerical solutions of integral equation methods for multi-element aerofoils, D.R. Chen and M.J. Sheu (3) 345–364

Plasticity

A framework for finite strain elastoplasticity based on maximum plastic dissipation and the multiplicative decomposition. Part II: Computational aspects, J.C. Simo (1) 1– 31

Shells and plates

A new finite element scheme for bending plates, Ph. Destuynder and Th. Nevers (2) 127–139

Buckling of polar orthotropic circular plates on elastic foundation by computerized symbolic algebra, I. Elishakoff and J. Tang (2) 229 – 247

Solutions of integral equations (singularity method)

Investigation of numerical solutions of integral equation methods for multi-element aerofoils, D.R. Chen and M.J. Sheu (3) 345 – 364

Stability in structural mechanics

Buckling of polar orthotropic circular plates on elastic foundation by computerized symbolic algebra, I. Elishakoff and J. Tang (2) 229 – 247

Structural mechanics

Decomposition methods for adherence problems in finite elasticity, P. Le Tallec and A. Lotfi (1) 67 – 82

Thermal effects and thermodynamics

Face-apex projectors for the interpolation function of a general tetrahedral mid-edge finite element, C. Lacombe and C. Bédard (2) 177 – 188

Buoyancy-induced inclined boundary layer flow in a saturated porous medium, J.-Y. Jang and W.-J. Chang (3) 333 – 344

Viscoelastic and viscoplastic media

Finite element model of viscoelastic membrane deformation, M.K. Warby and J.R. Whiteman (1) 33 – 54

Simple C^0 approximations for the computation of incompressible flows, R. Pierre (2) 205 – 227
